CERTIFICATE OF GENETIC ANALYSIS

Owner:
Mónica Gil Miralles, [redacted]

GENETIC TEST: Ridge predisposition

Name:	SAIMON'S PRAID BRIGHT FIRTS IMPRESION
Breed:	Rhodesian Ridgeback
Sex:	Male
Date of Birth:	06.05.2019
Registration number:	LOE 2494999
Chip:	972274000511061
Sample / ID / Lab ID:	blood / Tro / BC102
Sample received:	29.03.2023

RESULT: *R / R (Ridge / Ridge)*

Result interpretation:

R / R (Ridge / Ridge) - A ridge causing variant (133 kb duplication) was detected in two copies in tested individual. The sire/dam always passes one to their offspring. Ridge is a dominant trait, so their puppies are expected to have ridge in most cases.

R / r (Ridge / ridgeless) - A ridge causing variant (133 kb duplication) was detected in one copy in tested individual. The sire/dam has ridge in most cases but is a ridgelessness carrier. When mated to another R / r individual, statistically 25 % of puppies will be born ridgeless.

r / r (ridgeless / ridgeless) - no ridge causing variant (133 kb duplication) was detected in tested individual and is expected to be phenotypically ridgeless.

Authorised by: [redacted], Ph.D
Head of Laboratory
GenoCan genetic laboratory
Brno, Czech Republic

Date: 31.3.2023

Primary sample: *The animal identity was verified and sample taken by by veterinarian (Adriana Femenia I Pastor).*
Test accuracy: *The genetic test detects the 133 kb duplication involving genes (FGF3, FGF4, FGF19 and ORAOV1) on chromosome 18. The accuracy of the analysis is >97 %.*
